

Eduwrite AI

MOTIVATION

"

To reduce academic workload and help students convert complex information into structured, meaningful outputs efficiently 😊

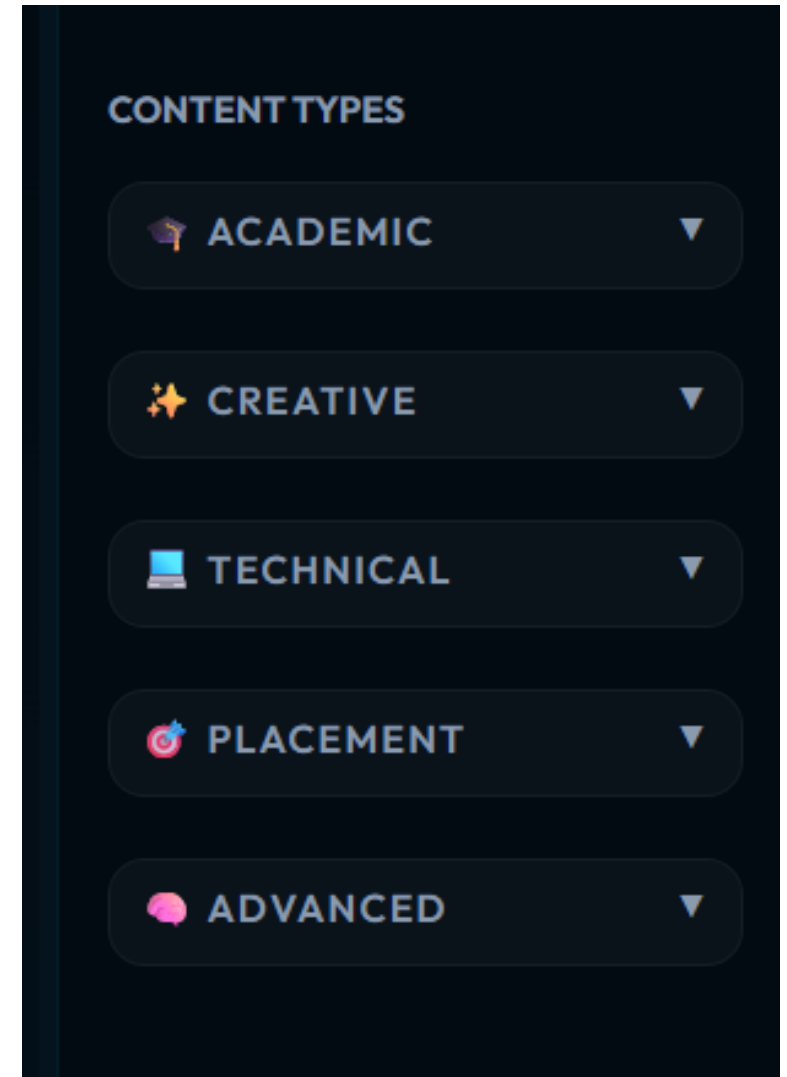

"

INTRO

- AI-powered chatbot similar to ChatGPT
- Can answer a wide range of questions
- Supports multiple domains (academic, general, creative)
- Provides structured and informative responses
- Helps with learning, writing, and problem-solving
- Fast and interactive conversational interface
-  Does not support image generation/

PROBLEM STATEMENT

EduWrite AI solves the problem of fragmented and inefficient academic content creation by helping students convert complex information into structured outputs like summaries, reports, and notes. It improves learning efficiency, ensures subject-specific accuracy, and makes knowledge more accessible. It is especially useful for students, technical learners, and researchers handling heavy academic workloads.

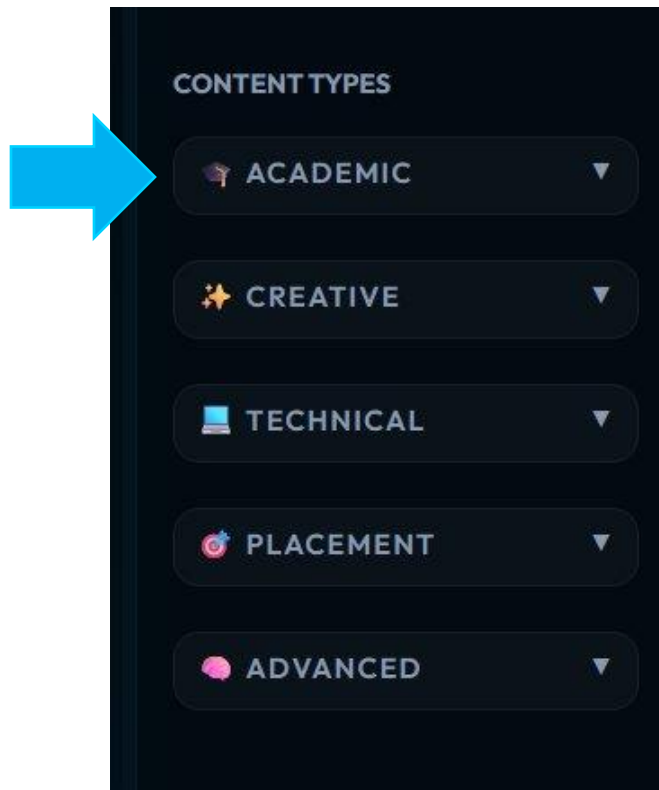

METHODOLOGY

The system solves academic inefficiency using a context-aware AI approach with expert persona prompting, document integration (PDF/TXT), and real-time web search. This ensures accurate, structured, and up-to-date responses tailored to specific academic needs.

It uses the **openai/gpt-oss-120b model via Groq**, along with React (frontend), Flask (backend), and MongoDB for storage. Groq LPUs enable fast processing, while additional tools support reasoning and real-time data retrieval.

The user provides input and selects a category, after which the system constructs context-aware prompts, processes the request using the AI model, formats the output (with markdown, code, equations), and stores results for future access.

OUTCOMES

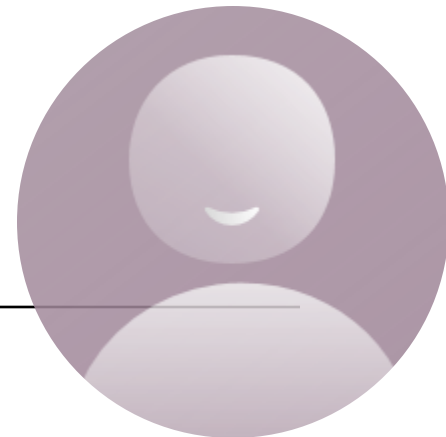

CONTENT TYPES

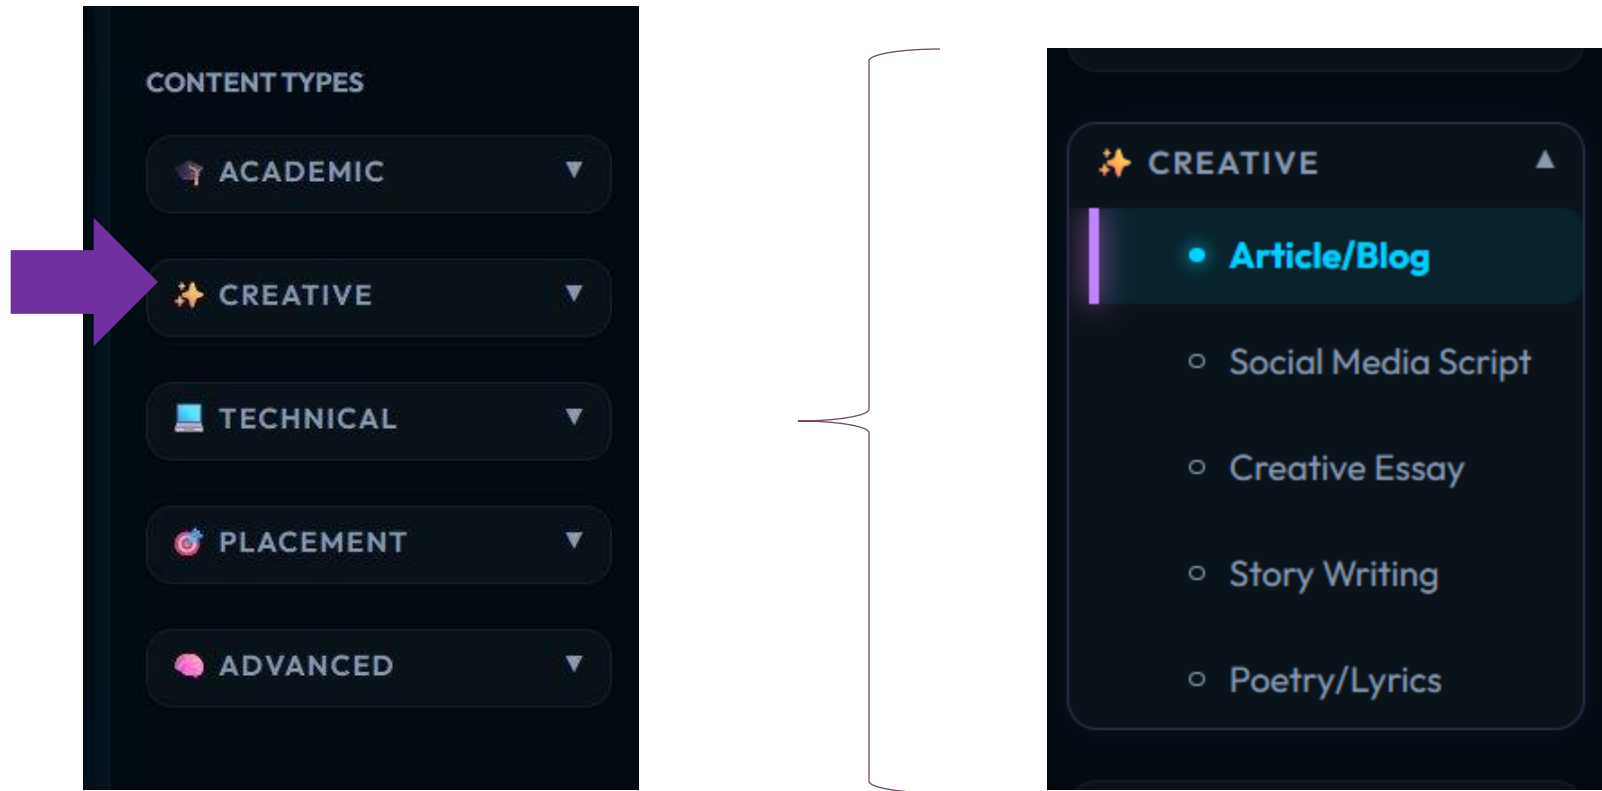

ACADEMIC ▲

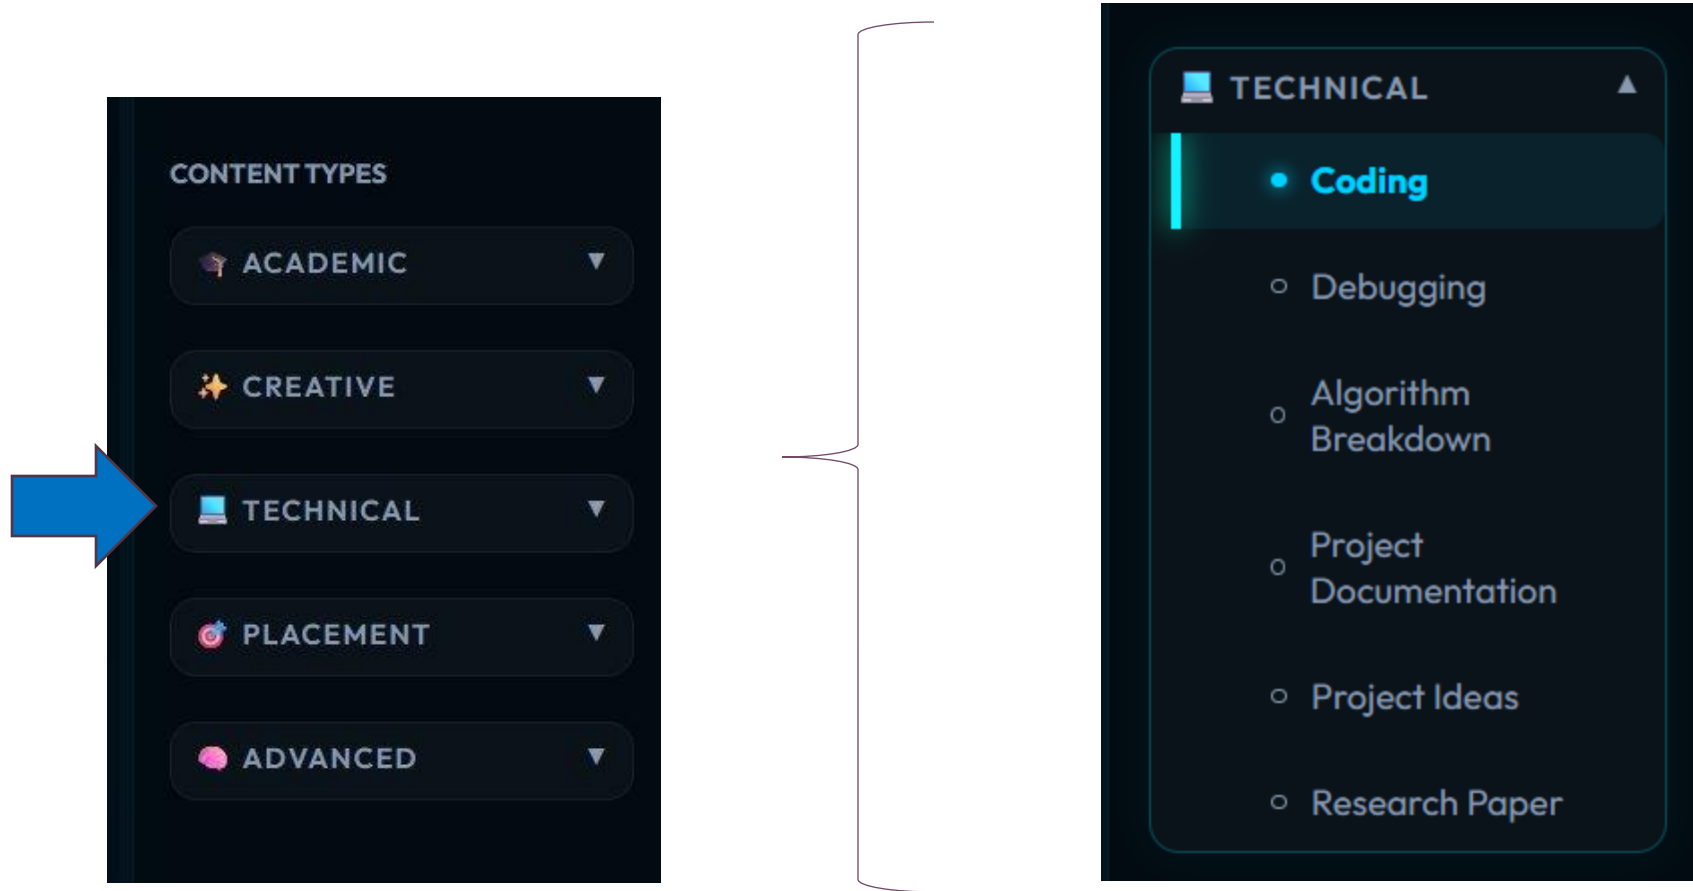

- Explanation
- Summary
- Assignment
- Viva Preparation
- Lab Report
- Revision Notes
- Formula Sheet
- Quiz
- Motivation of Goals
